                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                           In [1], they determined the nucleotide sequences of all exons and their surrounding regions of human TH gene, and the exon/intron boundaries are shown. The boundaries were determined by comparing the genomic DNA sequence with the CDNA sequence. The human TH gene is split into 14 exons. In [1], they concluded that the four types of human TH mRNA are produced through alternative splicing from a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
